End Application:
F/a-18
Product Name:
Tool set, valve-overload relief
Special Features:
The set will consist of four different tools. This will include a body tool, pin extraction tool, pin installation tool and a striker. During
installation the insert body is threaded onto the body tool for installation into it's respective bore. The set screw/pin is then threaded onto the
pin installation tool and installed to the body until flush. During extraction the striker is installed onto the pin extraction tool which is then
threaded inot the pin. The striker is then forsed against the head of the extraction tool until the pin is removed. The striker is used with the
body tool in the same manner to remove the insert body.
