End Application:

To remove the 10th, 11th, and 12th stage compressor stator shroud segments

Special Features:

Self contained assembly tool that is used to remove the compressor inner stator shroud segment without damaging them or the stator segment; the tool, which is used on a table top, provides a large swing arm of the same radius as the stator segments, the arm will contact the edge of the shroud just above the anti-rotation lugs, pivoting the arm will push out the shroud segments
