**Special Features:**

Gage assembly, radial play; rqr'd to inspect 5 main bearings to ensure radial clearance are within limits; c/o amplifier readout, precision chuck w/interchangeable jaws, counter blanced upper and lower pivot arms, gage head, adj. Vibrator, air driven loading system, and calibration mst set; amplifier readout has fuurranges; chuck has adj. Slip clutch for constant lock up; chuck and pivot arms support bearing on its bore or on its outside diameter; vibrator seats rolling elements in their rack; loading system loads bearing boring measurement process; calibration masters ensure gage is properly set up and calibrated; gage measures bearings w/inside dia. Of 1.0 in. To 10.0 in. Or outside diameters up to 15.0 in.; gage can measure radial play up to 0.010 in.; accuracy and repeatability of gage is p/m 0.0001 in.

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T303-b
