End Application:

Gage, flush pin-augmentor igniter flameholder segment

Special Features:

Gage is required for weld repair of p/n 4071179, augmentor Igniter flameholder assembly. Gage is used to verify the location of a gutter after it has been welded to a detail saddle. Gage consists of four flush pin gage blocks that probe position of gutter sides and end points in relation to the saddle on flameholder sub-assembly segment p/n4071182-01.Serd 9490
