Design Type:

Threaded

Special Features:

Used on the environmental control system of c130u aircraft. It is bored and threaded to match the ends of the shaft assembly. Their outside diameters will match the outside diameter of the shaft assembly. These outside diameters will taper slightly and contain a rounded end, thus enabling the shaft assembly to be installed through the air bearings without damaging or disturbing the stainless foils. The protector is approximately 2.50 inches long with a 1.750 inches diameter. The protector will be housed in a small box which will contain a cushioning material. The size of the box will be approximately 4.0 by 4.0 inches

Material:

Stainless steel

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
