Special Features:

This system is supplied with three dome shaped security plates that resist attack or defy removal attempts by wrenching, hammering or prying. The security plates are bonded to each piece of equipment, designed for the security cable to be run through the middle of each security plate. The bonding agent is supplied and shall withstand up to 750 pounds. The cable and lock are supplied. The steel cable has plastic coating and measures 6 feet long, designed to fit through the security mounting plates. The specialized lock is supplied with two serialized keys and designed so that replacement keys are not commercially available, except through the manufacturer or supplier

Supplementary Features:

Desktop microsaver universal security system; cable and lock device secures up to 3 pieces of computer equipment
