Special Features:

Designed with a security feature which allows tsa agents, using a secured access device, to open the lock without destroying it; searchalert window changes color from green to red when the tsa secured access device is used to open the lock, or when an unauthorized person has opened the lock using a counterfeit opening device; travel sentry is the new travel industry standard developed to enable passengers to once again lock their checked baggage. Each travel sentry lock carries a special identification mark which alerts the tsa that the lock can be opened; change the three-digit combination as many times as you'd like; instructions included
