**Overall Length:**

240.000 inches

**Overall Height:**

96.000 inches

**Overall Width:**

96.000 inches

**End Application:**

Authorized stockage list mobility system (aslms)

**Special Features:**

Performance: provides flexible storage capability that significantly reduces logistics footprint. Provides ready access to repair parts for use in both garrison and field environments. Provides fully integrated bailbar and rail system for quick container movement using hewtt lhs and pls trailer. Provides environmental element protection cover for personnel and equipment

**Functional Description:**

Description: the authorized stockage list mobility system (aslms) is a modularized, containerized class ix asl repair parts storage system that consists of two (2) side opening, tactically and strategically deployable, international organization of standardization (iso) compatible, linked storage containers // operational concept: the aslms provides ready access to repair parts for use in both garrison and field environments and is compatible with objective force transportation platforms and interoperable with united states air force, marines and navy transport systems and strategic lift assets. In both wartime and peace time, the aslms provides a standardized, modular, efficient means to receive, store, control and issue class ix asl repairs parts

**Color:**

Tan

**Reference Data And Literature:**

Tm 10-5411-236-13&p

**Supplementary Features:**

Transportability: loadable onto the hemtt-lhs and pls trailer 100% strategically deployable and tactically mobile containers stackable up to 9 high

**General Description:**

Major components: interchangeable, modular storage devices and integrated red/white lighting system // power requirements: accepts external power for lighting and electrical outlets

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No
