Functional Description:

Is a multipose, expandable processing unit using commercial 16 bit single board microcomputer tech; interface to direction finding system and interface to surveillance and warning subsystems

General Description:

Operating requirements 110-125 vac, 47/63 hz, single phase, 600 watts; 40.000 in high by 19.000 in wide by 21.000 in deep; rack mounted; comprised of multibus type boards, 70 megabyte winchester storage; individual dc power, modular

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
