End Application:

Spacelift range, western transmission network

Emission Type:

A3j

Operating Frequency:

Between 2.000 megahertz and 30.000 megahertz

Special Features:

Frequency range: 2-30mhz, the system uses 7 antennas in various combinations via a patching matrix, the molokai receiver system is operated by the wheeler network control center (wncc) and provides a communications link between ships, aircraft, downrange island and the range control elements in the missile flight path

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T199-c
