Special Features:

Fabs v2 software defined radio modulator and transmitter capable of configuring to transmit in several frequency ranges with a modular 2.7 ghz rf vector signal generator (vsg). Provides true 16-bit resolution arbitrary waveform generation at 100 ms/s (400 ms/s with interpolation), up to 512 mb of memory, and 20 mhz real-time bandwidth. It can generate custom and standard modulation formats including am, fm, pm, ask, fsk, msk, gmsk, psk, qpsk, pam, and qam

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A32200
