Special Features:

The model 1715 is a high contrast lcd radar designed for pleasure craft and small fishing boats. Radar echoes are presented in four shades of gray on the 7 inch silver bright lcd. The radar offers detailed pictures of coastline and targets at short ranges thanks to narrower pulselengths and dual if bandwidths. The antenna rotation speed automatically changes depending on the range selection for optimum target detection. The compact, waterproof display allows table top or panel mounting in the cockpit or on the open fly bridge. Other standard features include: ebl (electronic bearing line), vrm (variable range marker), tll output (target l-l), cursor l-l readout, echo trail, guard zone alarm, anti clutter rain, automatic control of tuning and sensitivity. The a-c rain control improves the target detection in the rain by elaborate design of the receiver.
