Overall Length:

25.000 inches

Overall Height:

8.750 inches

Overall Width:

19.000 inches

Average Life Measurement:

Not rated

End Application:

An/trq-4 (v) 1 radio set

Basic Shape Style:

Rectangular or square

Inclosure Type:

Encased

Installation Design:

Module

Circuit Construction Type:

Solid state

Operating Ac Frequency In Hertz:

47.0 single voltage and 440.0 single voltage

External Ac Operating Voltage In Volts:

230.0 1st voltage

Phase:

Single

Supplementary Features:

Unit is a scanning hf receiver which scans all 14, 000 3 khz wide channels spaced 2 khz apart between 2-30 mhz; it dwells on each channel long enough to assess the received power level and determine the background noise level; each channel is revisited approximately every 20 seconds; the data thus collected is averaged over either 5 or 30 minutes, and is presented to the operator in a series of crt displays; such channel occupancy data is useful to the frequency manager of an hf system by indicating which frequencies are clear of outside interference

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A32200
