End Application:

Afscn/cue an/fsq-15 (v)

Special Features:

This module is to develop a 50 mhz second intermediate frequency signal. Inputs to this module are a 180 mhz local oscillator signal and a 130 mhz first if signal. During monopulse operation, the 130 mhz first if signal is applied, and amplified 8 decibels with the signal taken out, then applied as input for further amplification before being sent to the predetection filters. The 130 mhz first if signal is applied directly during the conical scan mode. Lg 13.3 in, w 5.0 in, dp 1.3 in, wt 2.5 lbs

Shelf Life:

N/a

Unit Of Measure:
