Special Features:

Digital technical control (dtc) provides a deployable digital technical control capability for communication support organizations organic to marine air ground task (magtf). Dtc facilitates the installation, operation, restoration and management of individual circuits and digital trunks. Provides primary interface between subscriber system/networks within a local area and long haul multi-channel transmission systems. It can add, drop, insert digital circuits into multiplexed digital groups, provide a source of stable timing to connected equipment, condition analog circuits and performs analog/digital, 2-wire/4-wire, signal conversions. The dtc contains the monitoring, testing and patching equipment required by technical controllers to monitor, troubleshoot and restore faulty circuits and trunk. The dtc will be an s280 shelter for transport on a 5 ton truck

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
