**Special Features:**

2tdn server comprises 4 transit cases. Two are operational cases known as the lan access case and the network access case. The network case willb placed on top of the lan access case. Together these two cases constitute the tdn server in the operational mode. The remaining two cases are the ups storage case and the the user access storage case. Ups storage case contains anups that provides fluctuation isolation from a graceful system shutdown in the event of loss of externally generated power. The user access case is used for transporting other tdn server ancillary items and provides storage space for various cables, test equipment, etc., needed for the operation and maintenance. This v2 version includes the line capability in the user access case
