Special Features:

The nrk consists of two transportable, rack-mounted cases containing server, data storage and uninterruptable power supply equipment items and supporting devices. It is intended to be used to augment the npr n-segment

Functional Description:

The tactical local area network (taclan) non-secure internet protocol router (npr) redundancy kit, or npr redundancy kit (nrk), is a sub-set of, and an addition to, the full nsn: 5810-01-518-7269, the command and control (c2) nsn: 5895-01-559-8750 taclan suites, and the npr segment (n-segment) of equipment. The npr nrk provides a back-up server and storage capability for the unclassified network equipment segment included in the taclan full and c2 suites of equipment. When properly configured and connected to the dod non-secure can extend nprnet capability by providing redundancy in the event of a main n-segment failure

Supplementary Features:

The nrk is not designed to be used without the n-segment

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
