Electrical Filter Assembly - Page 1 of 1

View Online at https://aerobasegroup.com/nsn/5915-01-046-1125

## **Special Features:**

Shelf Life:

Fiig: A507h0

The filter assembly converts alternating current voltage inputs which are received from the interface assembly to voltage levels usable by the power supply assembly to power the terminal. The filter assembly inputs are 115/230 vac, 22-30 vdc and 12 vd (backup), the filter assembly outputs are a full wave rectified output at 22-30 vdc, a dc filtered output at 22-30 vdc and the 12 vdc(backup) on line to the power supply assembly
