Filter Quantity:

2

Filter Type:

Radio interference

Special Features:

71.0 ac-rms volts, 100 watts. Rejection network set provides a continuously tunable notch filter over the frequency range from 100mhz to 1000mhz and is intended to be used in performing spurious emission and intermodulation tests. This notch filter may also be used to protect the input of a receiver or spectrum analyzer when in the presence of a strong locally transmitted signal. The em7843/44 are passive filters

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
