Operating Temperature Range:

-55.0/+125.0 degrees celsius

End Application:

Direction finder, an/srd 502, southwest research institute

Features Provided:

Monolithic

Inclosure Material:

Silicon

Inclosure Configuration:

Dual-in-line

Output Logic Form:

Transistor-transistor logic

Design Function And Quantity:

1 decoder, binary coded decimal to decimal

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A458a0
