Operating Temperature Range:

-55.0/+125.0 degrees celsius

Features Provided:

Burn in and programmable

Inclosure Material:

Ceramic

Inclosure Configuration:

Dual-in-line

Output Logic Form:

Complementary-metal oxide-semiconductor logic

Design Function And Quantity:

1 array, logic

Time Rating Per Characteristic:

15.00 nanoseconds af output megawatts

Terminal Type And Quantity:

24 printed circuit

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A458a0
