End Application:

7385926 (53711) fwd propulsion section assembly

Product Name:

Module; very-high current-high power operational amplifier

Special Features:

Wide supply range from 10v to 50v; high output current is 15a peak; class a/b output stage is low distortion; voltage-current limit protection circuit; small to-3 (lmf)

Supplementary Features:

High voltage, very-high current operational amplifier designed to drive a wide variety of resistive and reactive loads; employs a laser-trimmed monolithic integrated circuit to bias the output transistors, providing low-level signal fidelity and high output voltage swing

Terminal Type And Quantity:

8 pin

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A458a0
