Special Features:

High performance user configurable embedded controller, 16 mhz instruction execution output port and address bus, single cycle control architecture one cycle per instruction, 16 bit cpu arithmetic operations logic operations, 33 general purpose registers, address generation up to 4 mbytes address space, re programmable program store 1k x 64 bit eprom for cpga package, 1008 x 64 bit eprom for pqfp package, two operating modes host processor peripheral or stand alone controller, security for eprom program memory

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A458a0
