**Product Name:**

Bipolar analog integrated circuit (switching regulator control circuit)

**Special Features:**

Complete pwm power control circuit, adjustable dead-time (0 to 100 percent); no double pulsing of same output during load transient condition, dual error amplifiers have wide common mode input voltage capability, circuit architecture provides easy synchronization, uncommitted outputs for 250-ma sink or source, with miss-operation prevention circuit for low level supply voltage, full pin-compatible tl494c

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli
