Product Name:

Bipolar analog integrated circuit (switching regulator control circuit)

Special Features:

Complete pwm power control circuit, adjustable dead-time (0 to 100 percent); no double pulsing of same output during load transient condition, dual error amplifiers have wide common mode input voltage capability, circuit architecture provides easy synchronization, uncommitted outputs for 250-ma sink or source, with miss-operation prevention circuit for low level supply voltage, full pin-compatible tl494c

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
