Operating Temperature Range:

-40.0/+85.0 degrees celsius

End Application:

Ca70608-00 (19156) , receiver-transmitter

Output Logic Form:

Complementary-metal oxide-semiconductor logic

Design Function And Quantity:

1 microcontroller

Product Name:

Navy: microcircuit; cage 19156: microcontroller, cop8sgr740n8, programmed, altered item drawing

Memory Capacity:

32k eprom; 512 bytes ram

Special Features:

Microcontroller, 8 bit cmos; 15 mhz; one time programmable; 32k eprom; 512 bytes ram; 40 pin dip package; part before programming alteration: cage 27014, p/n cop8sgr740n8

Terminal Type And Quantity:

40 pin

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A458a0
