Product Name:

Microcontroller with 64k bytes in-system prohrammable flash

Special Features:

Operating voltages 4.5v-5.5v for atmel atmega64, speen grades 0-16 mhz for atmega64, advanced risc archietecture, fully static operation, up to 16 mips throughtout at 16 mhz, high edurance non-volatie segments, 2 kbytes eeprom, 4 kbytes internal sram, special microcontroller features, power-on reset and programmable brown-out detection, internal calibratwed rc oscillator

Supplementary Features:

Low-power cmos 8-bit microcontroller based on the avr enhanced risc architecture.

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A458a0
