Product Name:

Time & frequency processors

Special Features:

Provide precision time & frequency reference to the host computer & peripheral data acquisition system. Time is acquired from either the gps satellites using a supplied antenna/receiver or from time code signals, typically irig b. Integration of the module is facilitated with optional drivers for several operating systems. Time is displayed on the front panel (hours, minutes, seconds) via led digits.

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A32200
