Product Name:

Antenna transceiver group (atg) for fire finder radar

Special Features:

Upgrade for 5895-01-451-0689; the atg (oy-112b/tpo) receives commands from the radar processor unit, transmits pulsed rf signals, and receives reflected rf signals. Received rf signals are down converted and sent back to the radar processor for processing. Monitored circuits status information is sent back to the radar processor. The atg is the primary power distribution and control source for the entire radar system. The antenna is erected to the vertical position for operation and lowered to the horizontal position for transport

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli
