Operation Method:

Electrical

Output Motion Scan Type:

Azimuth and elevation

Product Name:

Antenna assembly

Special Features:

Antenna drive da-1a is designed for mounting on the forward bulkhead behind the radome, drive provides for two-axis motion control and a waveguide section to couple x-band energy between the fat plate array and the tr-1 transmitter, da-1a is a single channel unit and houses one tr-1 transmitter receiver, one set of motors, motor drive module and power supply

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

T322-b
