**Overall Length:**

11.300 inches

**Overall Height:**

0.300 inches

**Overall Width:**

8.000 inches

**Average Life Measurement:**

Not rated

**End Application:**

An/fsq-15 (v) af satellite control network/common user element

**Basic Shape Style:**

Rectangular or square

**Circuit Construction Type:**

Solid state

**Special Features:**

Consists of 3 amplifier stages, an adjustable input impedance, attenuator networks, current amplifier, a line driver amplifier, and a monitor amplifier. Amplifier produces a current that is analogous to the frequency and amplitude of the incoming ac. Record amplifier provides broadband amplification of input data signals (50 hz to 2.0 mhz) while maintaining a flat freq response within porm 0.5 db. It feeds output signals to a record head driver at a nom 0.5 volt peak-to-peak and to a monitor output at a nom 1 volt rms

**Fsc Application Data:**

P/n 527260-01 recorder/reproducer

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

Yes - demil/mli

**Fiig:**

A32200
