Vibration Resistance Range In Hertz:

+100.0/+2000.0

Shock Resistance Rating In Gravitational Units:

50.0

Operating Temperature Range:

-55.0/+85.0 degrees celsius

Basic Shape Style:

Rectangular or square

Inclosure Type:

Hermetically sealed

Installation Design:

Portable

Circuit Construction Type:

Solid state

Frequency Per Channel:

0.1 gigahertz output channel and 18.0 gigahertz output channel

Overall Gain:

21.0 decibels

Product Name:

Multi-octave wideband microwave amplifier

Special Features:

Applications include microwave radio and vsat, military and space, test instrument, fiber optics, and telecom; wide bandwidth; low power and noise; flat gain response; drop-in-assembly

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

Yes - demil/mli

Fig:

A32200
