End Application:

The scm9b-5000 four channel sensor to computer modules are a family of complete solutions designed for data acquisition systems based on personal computers and other processor-based equipment with standard serial i/o ports

Product Name:

K thermocouple input rs-485 output

Special Features:

Thermocouple type factory set; rangem150.0 to p1250 degrees c; resolution porm 1 pct; accuracy, error from all sources, from 0.0 to p40.0 degrees c ambient porm 1.0 degrees c; input impedance 100 m min; lead resistance effect less than 20 uv per 350; open thermocouple and overrange indication; input burnout protection to 250 vac; user selectable degrees c or f; automatic cold junction compensation and linearization

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A511k0
