Special Features:

The mmx-101 is small enough to fit inside a single gang junction box behind the device being monitored; the small size and light weight allow it to be installed without the need to be rigidly mounted; controls include two rotary switches for direct dial entry of decade address (01-99)

General Description:

Mmx-101 provides an interface between am2020, afp1010, afp-200, or system 5000 (equipped with an aim-200 module) and normally-open contact alarm initiating devices; though the mmx-101 can be used to monitor an entire style b (class b) initiating circuit, it is ideally suited for monitoring single devices
