Overall Length:

12.000 inches

Overall Width:

12.000 inches

Thickness:

0.030 inches

Product Name:

Eccoshield electrically conductive plastic sheet based on a vinyl resin and silver

Special Features:

Eccoshield lsv is a vinyl based material; due to its low volume resistivity; eccoshield lsv may be preferred on some shielding applications requiring higher electrical conductivity; eccoshield. Lsv gaskets can be adhered to one surface of a door or lid and squeezed upon closure to produce the rf and hermetic seal; eccoshield lsv has been used as an electrical conductor at 60 hz with a current density of 400 amperes/in² (62 amperes/cm²) in still air for an extended period of time with no detrimental effect; eccoshield lsv is resistant to jp-4 jet fuel and commonly used hydraulic fluids; if required, a conductive solvent based adhesive called eccoshield vca can be used to bond the material to metal

Material:

Plastic vinyl

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A506y0
