Regulation Type:

Multiple stages

End Application:

Paracorporeal ventricular assist device (pvad)

Charger Type:

Solid state semiconductor

Charging Voltage In Volts:

250.0

Charging Current Rating In Amps:

0.750

Charging Regulation Method:

Controlled

Battery Type For Which Designed:

Lead-acid

Product Name:

Battery charger assembly

Special Features:

For drive console tlc-ii portable vad driver model 2601; 3/4a 250v 2ag; slow blow fuse

Supplementary Features:

This charger is for use with batteries that contain lead or lithium; dispose of or recycle batteries in compliance with all local, state, and federal laws and regulations; never incinerate these batteries; recharges up to 2 tlc-ii batteries at a time

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

A31600
