Special Features:

Wiring harness, branched; consists of colored insulation electrical wires of the proper length to connect to their respective terminals. The colored wires represent a standard wiring system as follows: white-ground; green-rh. Dir. Signal and stoplight; black-red marker lights; red-stoplight; brown- tail and extra marker; yellow-I.H. Dir signal and stoplight. The green, brown and yellow wires also branch off and are connected through 4 and 6 ohm resistors. From the resistors, the wires are connected to a military plug 96906-ms-75021-1
