Special Features:

The cm2nd circuitry is housed in a protective cover on which the system operating instructions are listed; the cm2nd is capable of stand alone operation in the event of loss of communication with the network master controller; optional regenerative software permits multiple cm2nd that remain connected to each other to communicate and function in the event of a master network failure or loss of communications

General Description:

Cm2nd is a secondary controller for use on network irc-3/fcc systems; cm2nd controllers contain all the circuitry, memory, and instructions to communicate with the master network controller; the cm2nd incorporates a two line 40 character alphanumeric liquid crystal display (lcd), led status indicators, and control switches; the cm2nd mounts in one standard module footprint

Shelf Life:
