Body Material:

Cellulose

Filtering Surface Area:

1160.000 square centimeters

Sterility:

Sterile

Disposition After Initial Use:

Disposable

Capacity Accommodated:

90.0 milliliters

Dialyzer Element Form:

Hollow fiber

Membrane Thickness In Microns:

10.0

Special Features:

Individually wrapped; regenerated cellulose (cuprammonium rayon) membrane material; 90 ml priming volume; 180 micron i.D.; 10 micron wall thickness; 150 g total weight; 12 per package.

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

T117-e
