End Application:

Advanced heart failure patients

Product Name:

Pvad pump

Special Features:

Paracorporeal ventricular assist device-pvad pump; supplied with 1 set of pneumatic leads, 1 set of electrical leads and 1 vad surgical accessory kit; the pvad pump is a prosthetic ventricle consisting of a smooth, seamless pumping chamber enclosed in a rigid polysulfone case; allows blood to flow from the natural heart to the pvad outside the body through an implanted atrial or ventricular cannula. It then pumps blood back into the body through another implanted arterial cannula

Supplementary Features:

Includes a sensor that detects when the pvad is full of blood which triggers the ejection of blood from the pump; used for post-cardiotomy recovery and bridge-to-transplantation

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T133-k
