**Specific Use:**

Clamping and body contour conformation

**End Application:**

Pectus excavatum and other sternal deformities

**Design Designation:**

Biomet

**Material And Location:**

Steel, corrosion resisting fastening device

**Design Form:**

Straight

**Product Name:**

Elongated pectus stabilizer

**Special Features:**

For use with pectus bar implants; material is stainless steel astm f138; usually 1 stabilizer bar is used per pectus bar for proper correction and stability placed one or two intercostal spaces superiorly or inferiorly to the first bar

**Shape:**

Long u

**Supplementary Features:**

Stabilizer is secured to the bar and sutured to the muscle; bar and stabilizer are secured to each other to the chest wall with multiple sutures to anchor them to the chest wall and bury them with tissue

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fiig:**

T133-d
