Product Name:

Inoue-balloon catheter 26mm

Special Features:

Balloon catheter is polyvinyl chloride with a balloon attached to the distal end, has two latex layers between which is polyester micromesh. Supplied in a 12f diameter with a length of 70 cm; the length of each balloon is 2.5 cm (unstretched). Two proximally positioned stopcocks accomplish balloon inflation and catheter venting. Stainless steel tube used to stretch and slenderize the balloon prior to insertion and a 14f tapered dilator enlarges the interatrial opening. The stainless steel stylet and guidewire is employed to guide the catheter inside the heart and blood vessels. Balloon dilation available range 22-26 mm; diameter 26 mm. Balloon design exhibits five uniquely different inflation stages. Includes inoue-balloon catheter, dilator, guidewire, balloon stretching tube, syringe, caliper and stylet. Product contains natural rubber latex which may cause allergic reactions.
