Product Name:

Infrascanner model 2000

Special Features:

Accurate, clinically effective screening solution for head trauma patients in settings where timely triage is critical; allows for early detection of intracranial hematoma due to unique light absorbing properties of hemoglobin and non-invasive, non-ionizing nature of near-infrared (nir) technology; packaged in a protective case; patient measurement is completed within 2-3 minutes; can detect hematomas greater than 3.5 cc in volume; detects hematomas up to 2.5 cm deep from the surface of the brain (or 3.5 cm from the skin surface)

Shelf Life:

N/a

Unit Of Measure:
