Product Name:

Tactical mechanical tourniquet

Special Features:

The tactical mechanical tourniquet (tmt) is a hemorrhage control device specifically designed for massive hemorrhage control of an extremity; designed to ensure ease of application, definitively control hemorrhage and eliminate the current tourniquet percentage of failure rates; taught as a self-aid/task, the tmt requires minimal training to instantly treat life-threatening hemorrhage of an extremity; true one-handed application for both upper and lower extremities in 30 seconds or less; wider band (2) for occlusion at lower pressure; a dual locking mechanism to prevent slippage or inadvertent release; advanced materials with ir and uv protection; audible signature click identifying the torsion bar is locked in place; designed for the warfighter; reduced form factor and space claim; light weight and easy to deploy; fits into the currently fielded tourniquet carrier; ruggedized for all environments; dod tested

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T133-m
