Product Name:

Tactical pneumatic tourniquet tpt3

Special Features:

The tactical pneumatic tourniquet (tpt3) is a hemorrhage control device specifically designed for massive hemorrhage control of an extremity; using subject matter experts, advanced research and lessons learned from the battlefield, the tpt is designed to ensure effective hemorrhage control through consistent and complete circumferential pressure while virtually eliminating the possibility of neurovascular damage; application for both upper and lower extremities in 45 seconds or less; pneumatic design guarantees occlusion at lower pressures; multi-use with appropriate cleaning; wide band available in both 2 and 3 width; a secondary mechanism to prevent slippage; audible signature click identifying the slider is locked in place; designed for the first responder; reduced form factor and space claim; light weight and easy to use; ruggedized for all environments; dod tested for efficacy

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fiig:

T133-m
