Product Name:

Beveling system ophthalmic lens

Special Features:

Ophthalmic lens beveling system; used to edge lenses for eyewear and comes complete with a vacuum system and accessory kit; cuts all shapes, sizes and powers of cr-39, polycarbonate and hi-index lenses without changing cutters; the carbide blades cut instead of grind, so there is no rounding of the bevel; plastic debris is removed by a vacuum system, eliminating the need for coolants; system should provide for fully variable front-to-back placement on all periphery finishes
