Usage Design:

For detecting the presense of bacterial agglutinins associated w/bacterial infection or previous exposure to a related organism

Test Capability Quantity:

600

Protective Storage Feature:

Requires refrigeration between 2 degrees to 8 degrees c

Product Name:

Test kit febrile antigen detection sufficient for 600 tests

Component Breakdown Within Each Test Kit:

Contains 5 ml vial of the following: brucella abortus antigen, parathyroid a antigen, b antigen, thyphoid h antigen and o antigen, proteus ox19 antigen, febrile positive control serum, febrile negative control serum, used with both slide and tube agglutination procedures

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A510v0
