Features Provided:

Enzymeimmunoassay

Protective Storage Feature:

Expiration dated and requires refrigeration between 2 degrees to 8 degrees c

Product Name:

Epstein-barr virus nuclear antigen-1 test kit

Component Breakdown Within Each Test Kit:

Recombinant ebna-1 antigen coated microassay plate: 95 wll, configured in twelve 1x8 strips; serum diluent; calibrator: human serum; high positive contro: human serum; negative control: human serum; low positive control: human serum; horseradish-peroxidase conjugate: goat anti-human igg; chromogen/substrate solution: tetramethylbenzidine; wash buffer 20x concentrate; stop solution: sulfuric acid

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No

Fig:

A510v0
