Features Provided:

Enzymeimmunoassay

Protective Storage Feature:

Expiration dated and requires refrigeration between 2 degrees to 8 degrees c

Product Name:

Epstein-barr virus early antigen diffuse

Component Breakdown Within Each Test Kit:

Affinity purified ea-d coated microassay plate: 96 wells, configured in twelve 1x8 strips; serum diluent: proclin (0.1 percent) as a preservative, ph 7.5; calibrator: human serum, sodium azide (0.1 percent) and pen/strep (0.1 percent); high positive control: human serum; low positive control: human serum; negative control: human serum; horseradish-peroxidase (hrp) conjugate: goat anti-human igg; chromogen/substrate solution: tetramethylbenzidine (tmb); wash buffer (20x concentrate); stop solution: sulfuric acid solution

Shelf Life:

N/a

Unit Of Measure:

--

Demilitarization:

No
