**Features Provided:**

Enzymeimmunoassay

**Protective Storage Feature:**

Expiration dated and requires refrigeration between 2 degrees to 8 degrees c

**Product Name:**

Epstein-barr virus early antigen diffuse

**Component Breakdown Within Each Test Kit:**

Affinity purified ea-d coated microassay plate: 95 wells, configured in twelve 1x8 strips; serum diluent: proclin (0.1 percent) as a preservative, ph 7.5; calibrator: human serum, sodium azide (0.1 percent) and pen/strep (0.1 percent); high positive control: human serum; low positive control: human serum; negative control: human serum; horseradish-peroxidase (hrp) conjugate: goat anti-human igg; chromogen/substrate solution: tetramethylbenzidine (tmb); wash buffer (20x concentrate); stop solution: sulfuric acid solution

**Shelf Life:**

N/a

**Unit Of Measure:**

--

**Demilitarization:**

No

**Fig:**

A510v0
